Online worldwide weather information at your fingertips with Safesee™

Whatever marine industry or environment you work in, we can help you reduce your exposure to risk and uncertainty and give you the confidence to make the right decisions. Our Safesee™ product provides a one-stop weather information web platform for the marine market, particularly offshore oil, gas and wind energy companies.

Safesee™ can help you to:

- reduce your exposure to risk with accurate and reliable weather information;
- optimise resource planning and decrease costs;
- protect people and assets by minimising health and safety risks;
- improve operations and maintenance planning; and
- make the best use of available weather windows.
Supporting your operations
Safeseé™ enables you to visualise weather elements for your operating sites anywhere in the world. This helps you to make the best decisions essential for the safe and efficient planning of day-to-day marine and weather sensitive operations.

Information at your fingertips - Convenient, speedy and easy access to online meteorological and metocean information around the clock. A streamline version is available for customers with broadband issues.

Intuitive system - Recognises the user at login, with functionality to remember preferences, saving time and effort.

Site-specific forecasts - Key marine criteria – weather and wave – presented in text and graphical formats, enabling quick identification of weather windows via the web.

Customise your view - Set your own thresholds for weather criteria and receive a summary of the complete weather situation across all of your sites out to five days.

Clear visualisation - Safeseé™ brings the weather to life with the elements of wind, rain, wave and current (observations and forecast) animating through time.

Observations table - Safeseé™ has the capability to display data from customer buoys, offering a more comprehensive picture of marine conditions.

Global map view - Visualise weather elements over your operating sites anywhere in the world. A ‘hover over’ summary shows what the forecast conditions are expected to be compared to their operating thresholds up to five days ahead.

Superuser functionality - Customers can administer features of the system, for example set thresholds, display local time or link to our other services. This gives you greater control over how you use Safeseé™.

Aviation forecasts - Aviation forecasts help you with the logistics of your operations. View information from Volcanic Ash Advisories, low level significant weather charts for the UK and Europe, and Terminal Aerodrome Forecasts or METARs for each airport.

For more information on how our marine forecasts can help your operations, please call +44 (0) 1224 629805 or email marine@metoffice.gov.uk
