

Met Office

Volcanic Ash – 1315 UTC annotated satellite image

Issued 1330 UTC on Tue 13 Dec 2016

EXERCISE

EEEN41 MSG Dust RGB 13/12/2016 1315 UTC

**LOW CONFIDENCE-**  
Eruption site and downwind plume obscured by thick meteorological cloud layers. Further, due to very bad weather conditions the data from the radar is not very clear. IMO estimate the plume height to still be around 12KM.
