Solution Concept: Toward Predictive Maintenance

Hassan Al Sakka and Nipesh Dulal

Electronics

Helicopters

Aircraft

Cyber & Security

Space

Unmanned Systems

Aerostructures

OUTLINE

- IoT
- Example
- Monitoring and maintenance
- The concept
- Advantage

OUTLINE

- **IoT**
- Example
- Monitoring and maintenance
- The concept
- Advantage

INTERNET OF THINGS: IOT

Interconnected ecosystem of physical devices, embedded with sensors and software.

Communicating and exchanging data seamlessly over networks .

Improve efficiency and add value.

Image credit: news.mit.edu

OUTLINE

- IoT
- **Example**
- Monitoring and maintenance
- The concept
- Advantage

CURRENT REAL TIME EXAMPLE

OUTLINE

- IoT
- Example
- **Monitoring and maintenance**
- The concept
- Advantage

TYPES OF MAINTENANCE

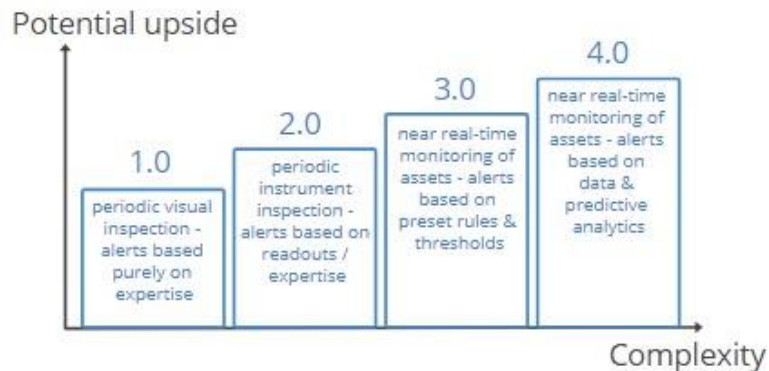

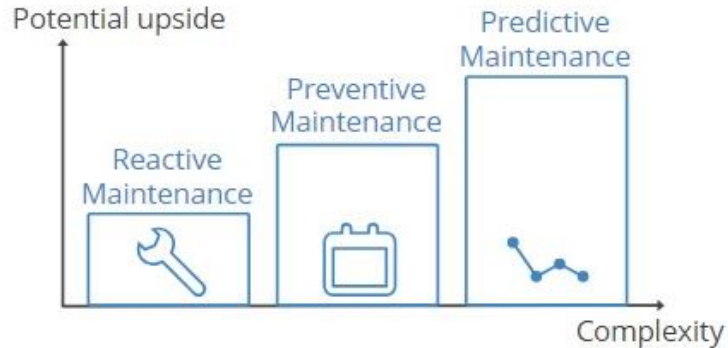

Image credit: <https://www.csselectronics.com/>

- **Reactive Maintenance (hotline, helpdesk, remote check):**

Address issues post-failure or open question.

Often involves on-site, immediate response

- **Preventive Maintenance:**

Regularly scheduled.

On-site checkups based on experience and expertise

- **Predictive Maintenance 1.0 and 2.0:**

Utilizes set rules and thresholds for alerts.

Part of the RAVIS approach

- **Predictive Maintenance 3.0 and 4.0: DATACENTER**

TYPES OF MAINTENANCE

PREDICTIVE MAINTENANCE

Centralizing the data

Image credit: <https://www.csselectronics.com/>

OUTLINE

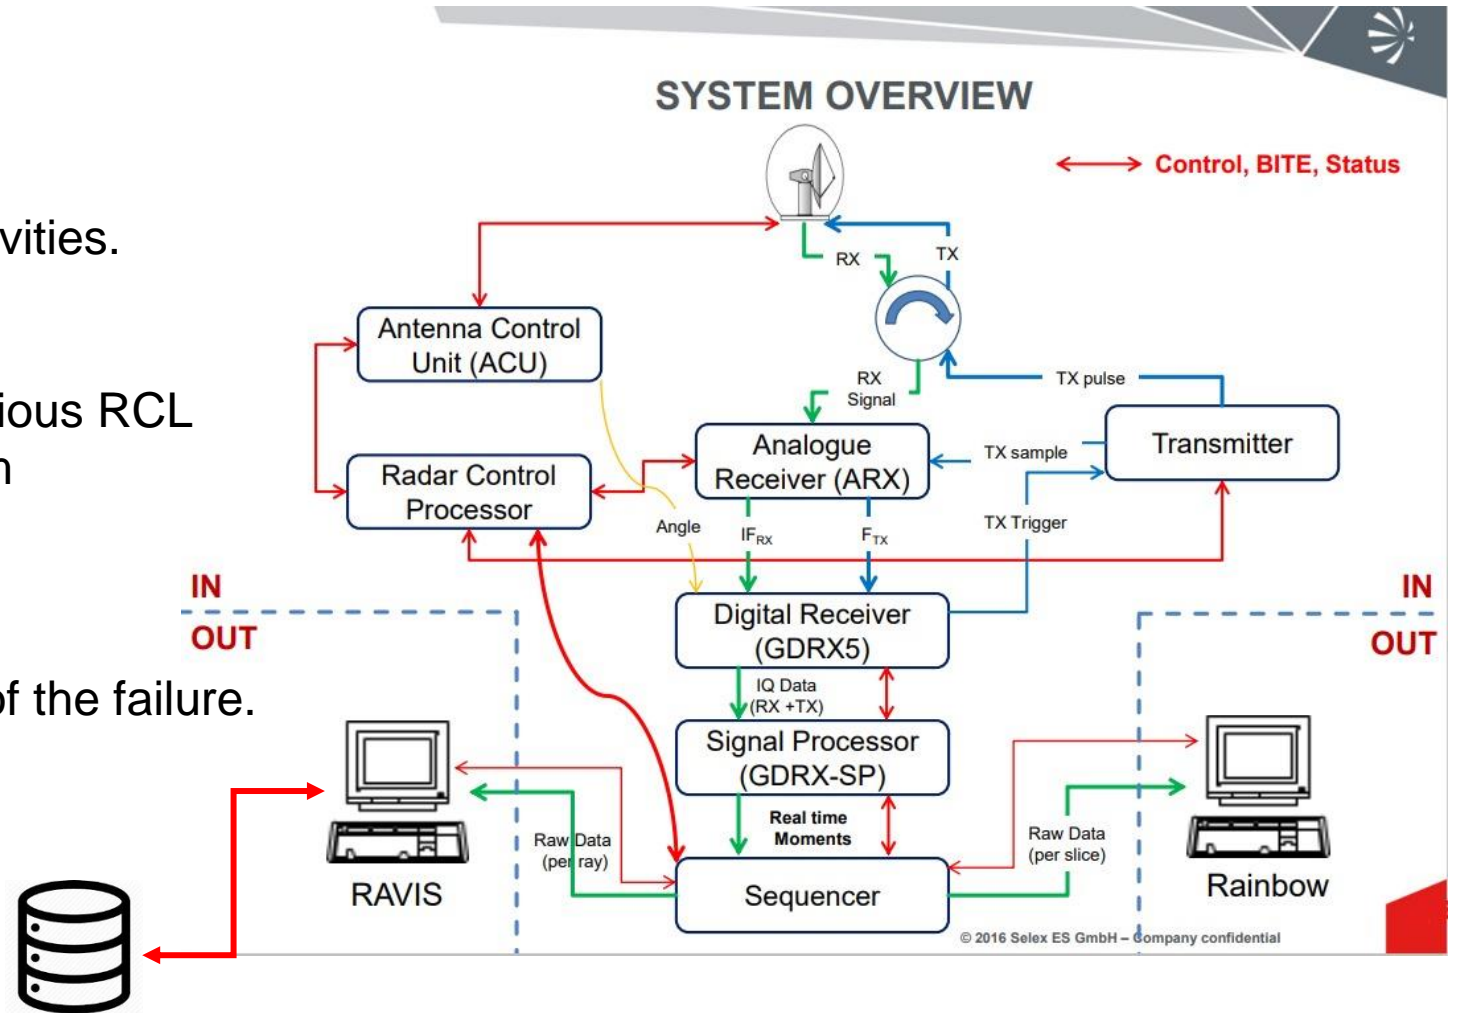

- IoT
- Example
- Monitoring and maintenance
- **The concept**
- Advantage

Back to Radars/Lidars

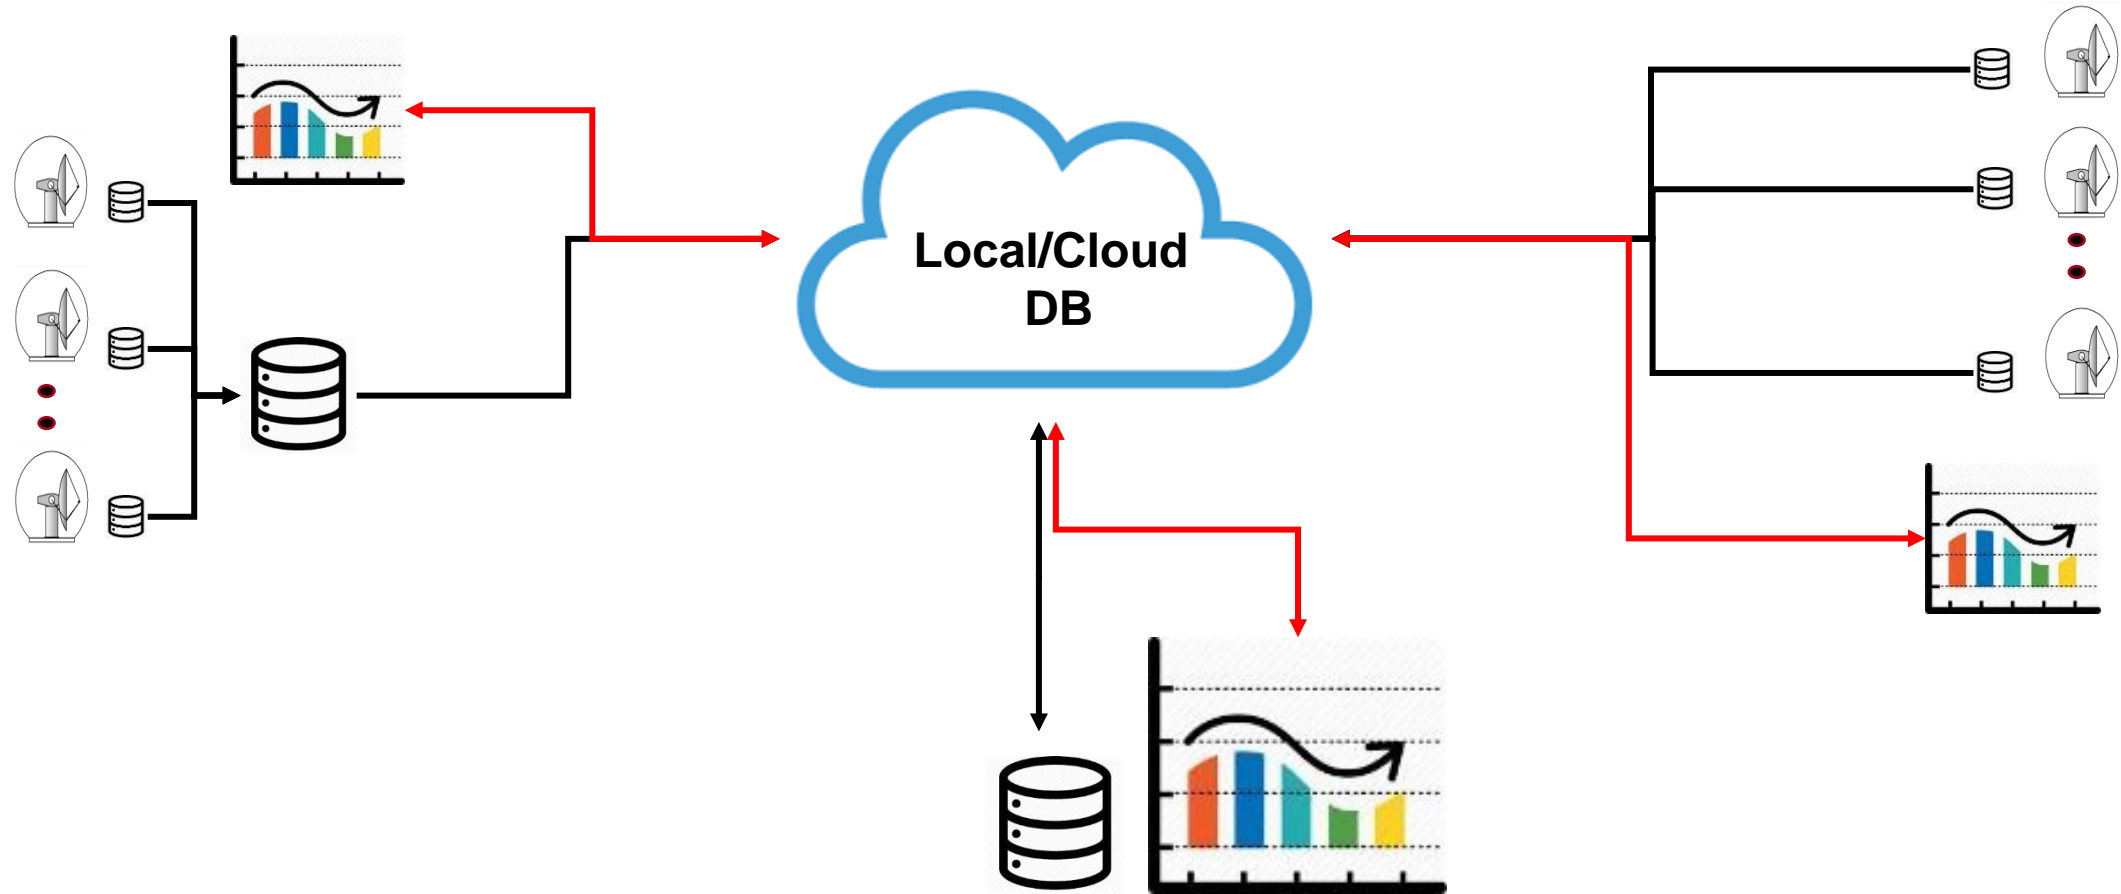

Features which already used in

- for Monitoring and Control activities.
- Supplies real-time data for various RCL states of different radar system subsystems.
- Identify the underlying cause of the failure.

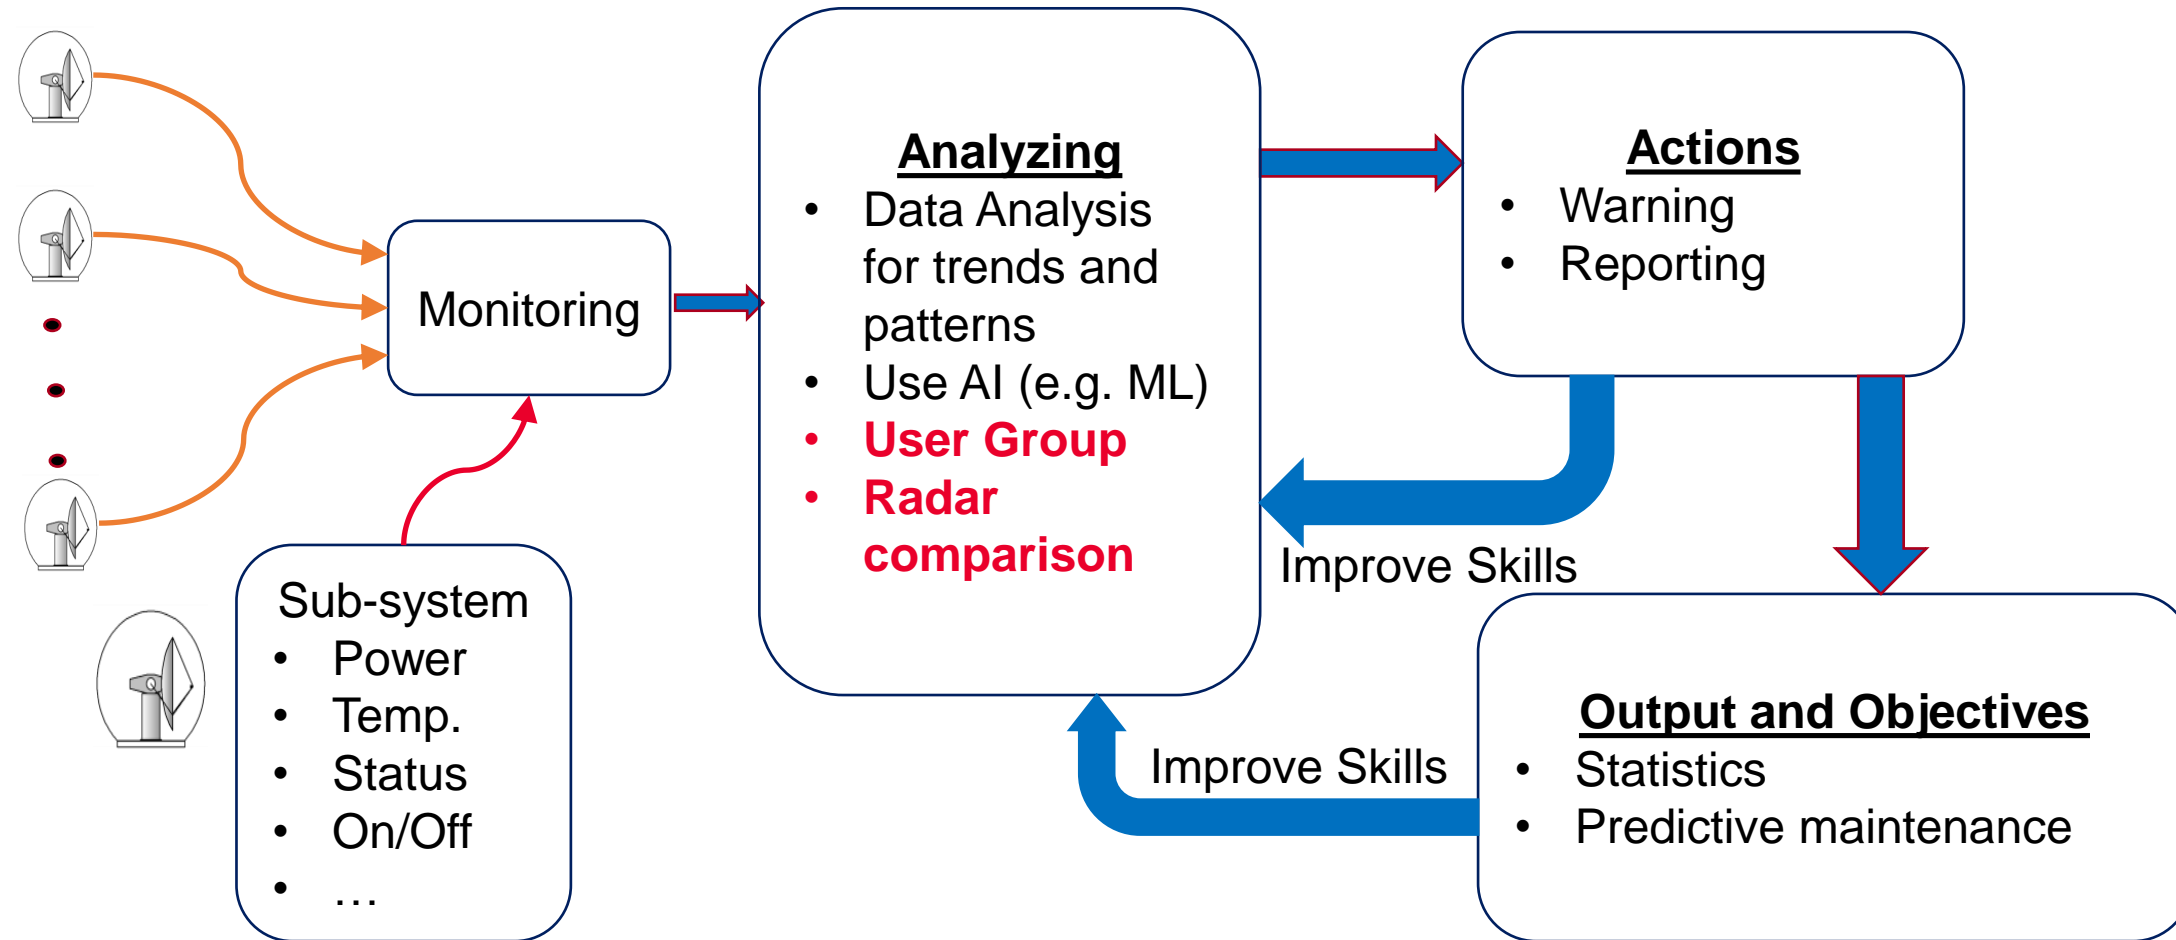

TO THE DATA

Data Center

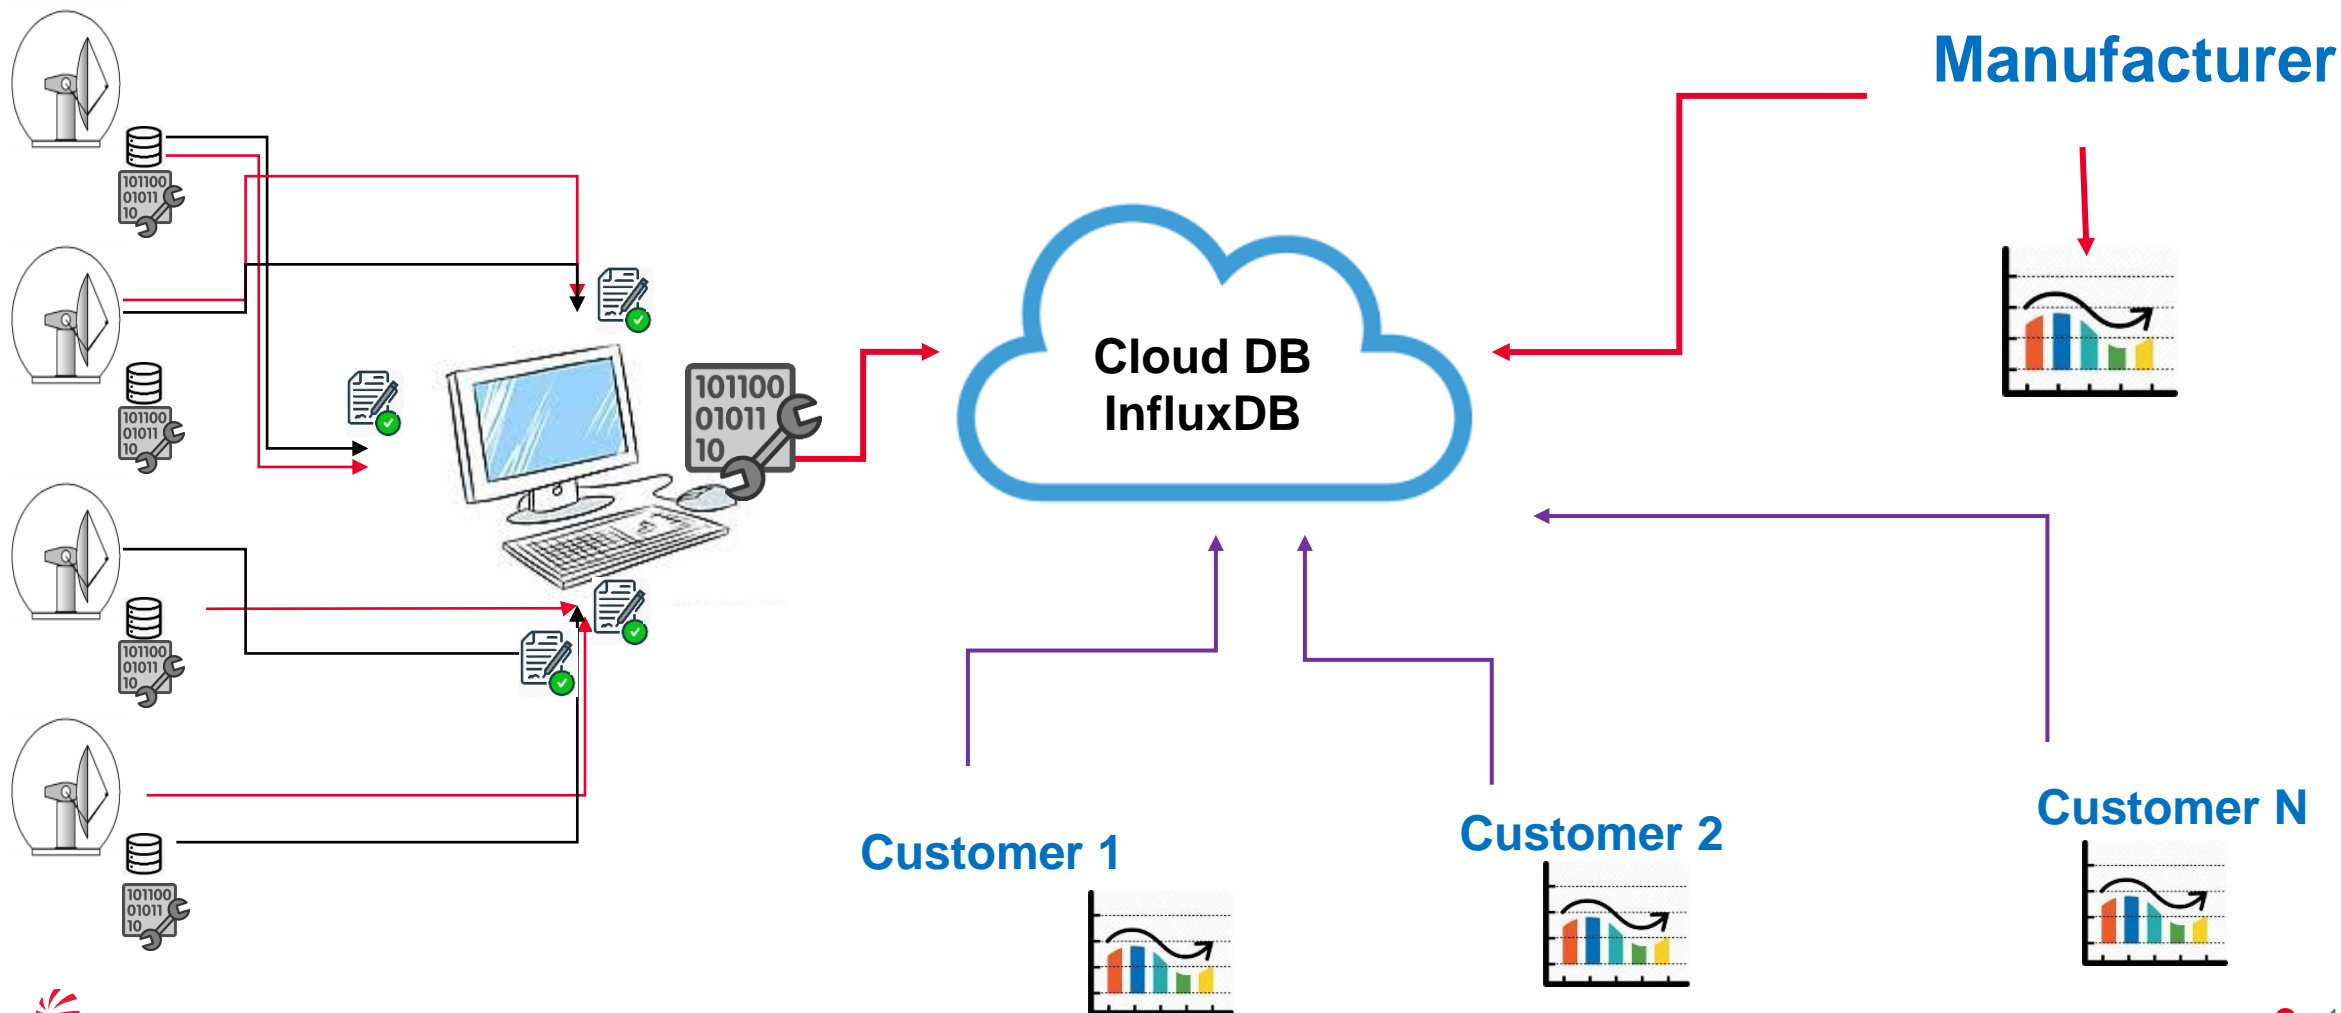

WORKING SCENARIO

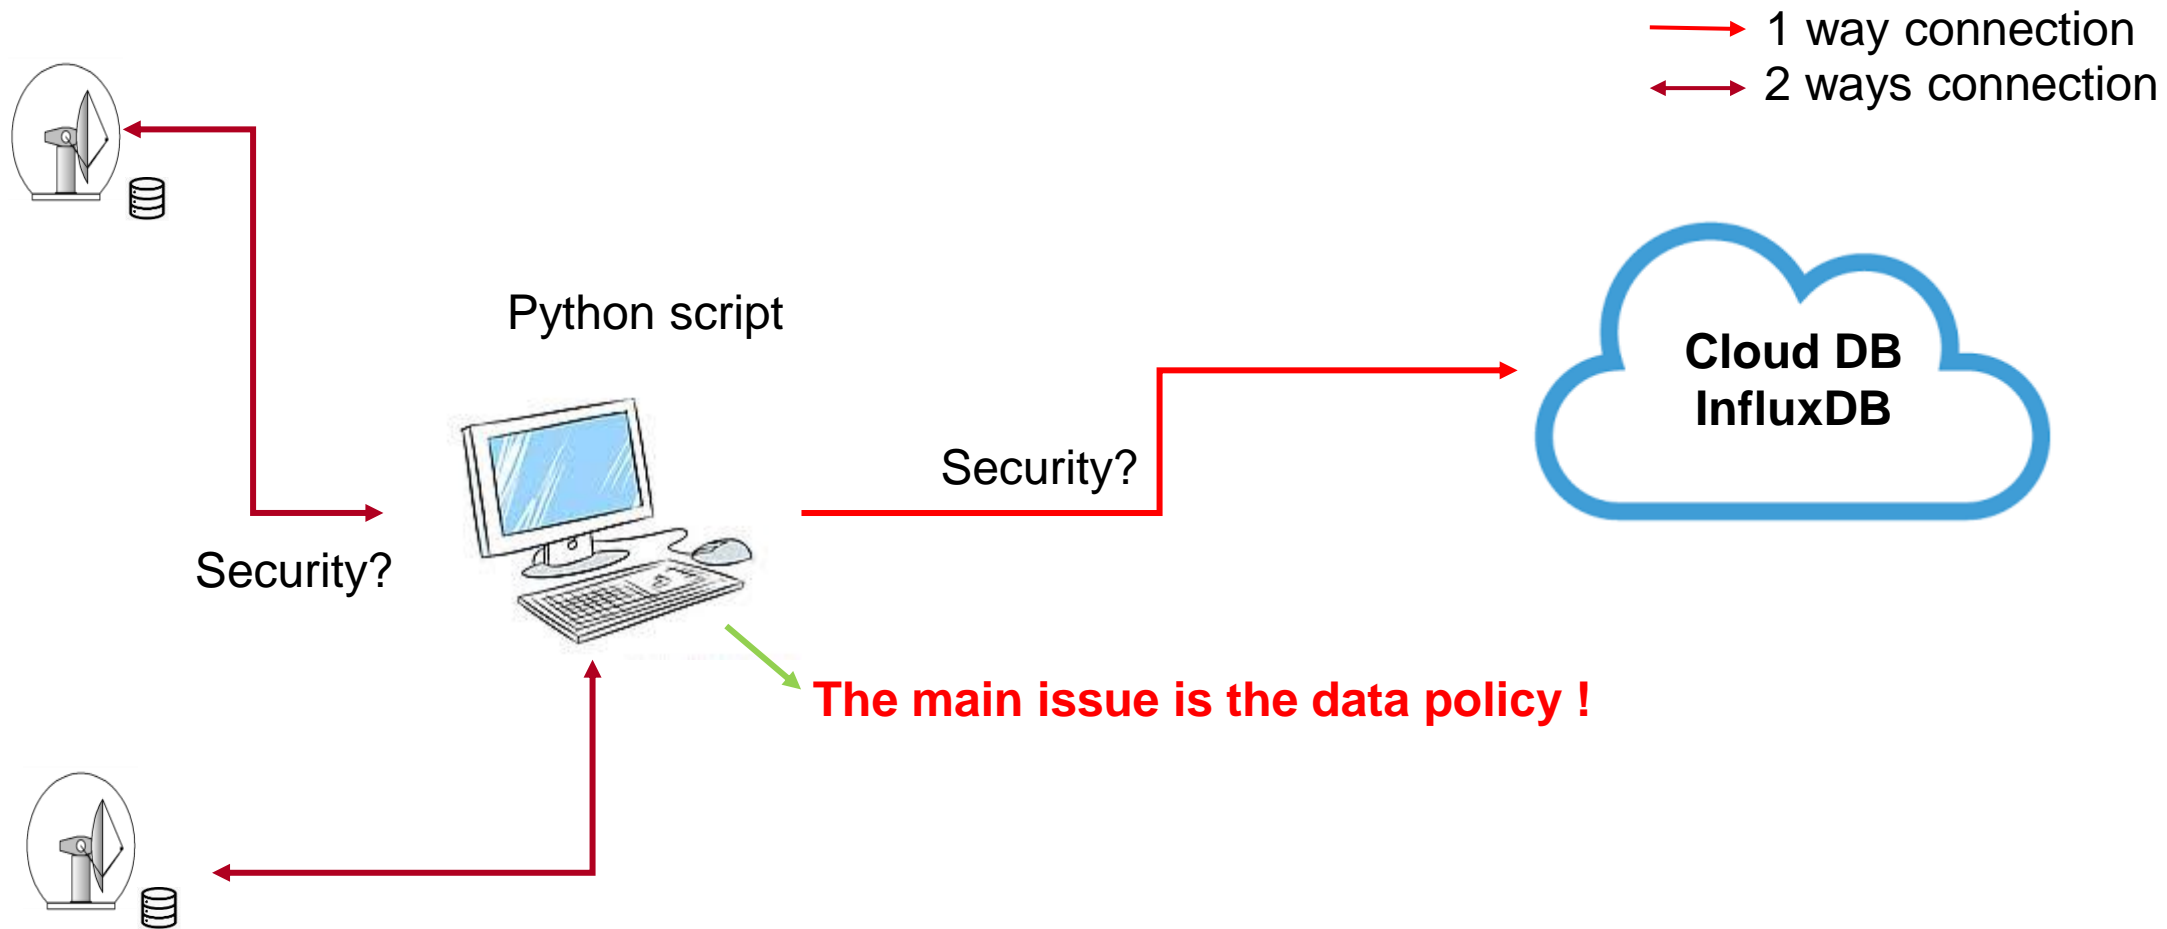

Data Center

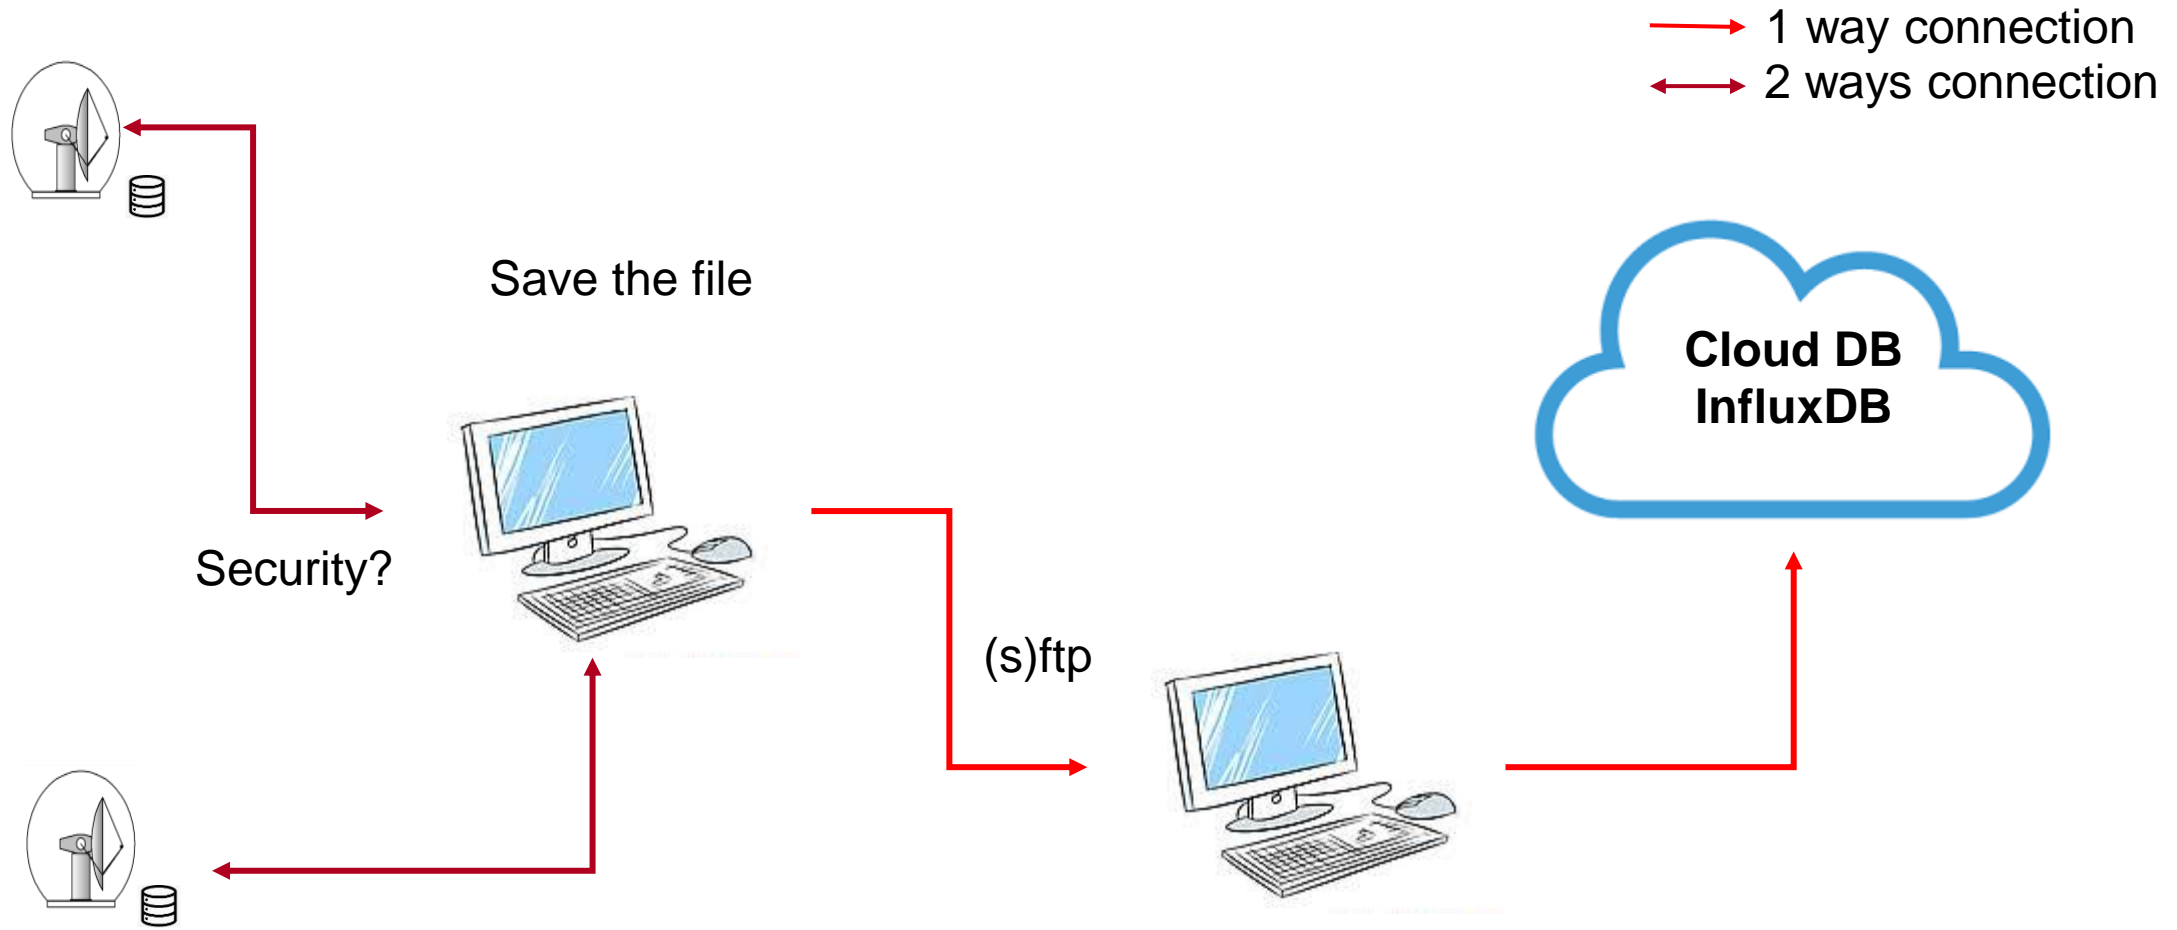

REAL TIME CONNECTION

REAL TIME CONNECTION

ALTERNATIVE CONNECTION

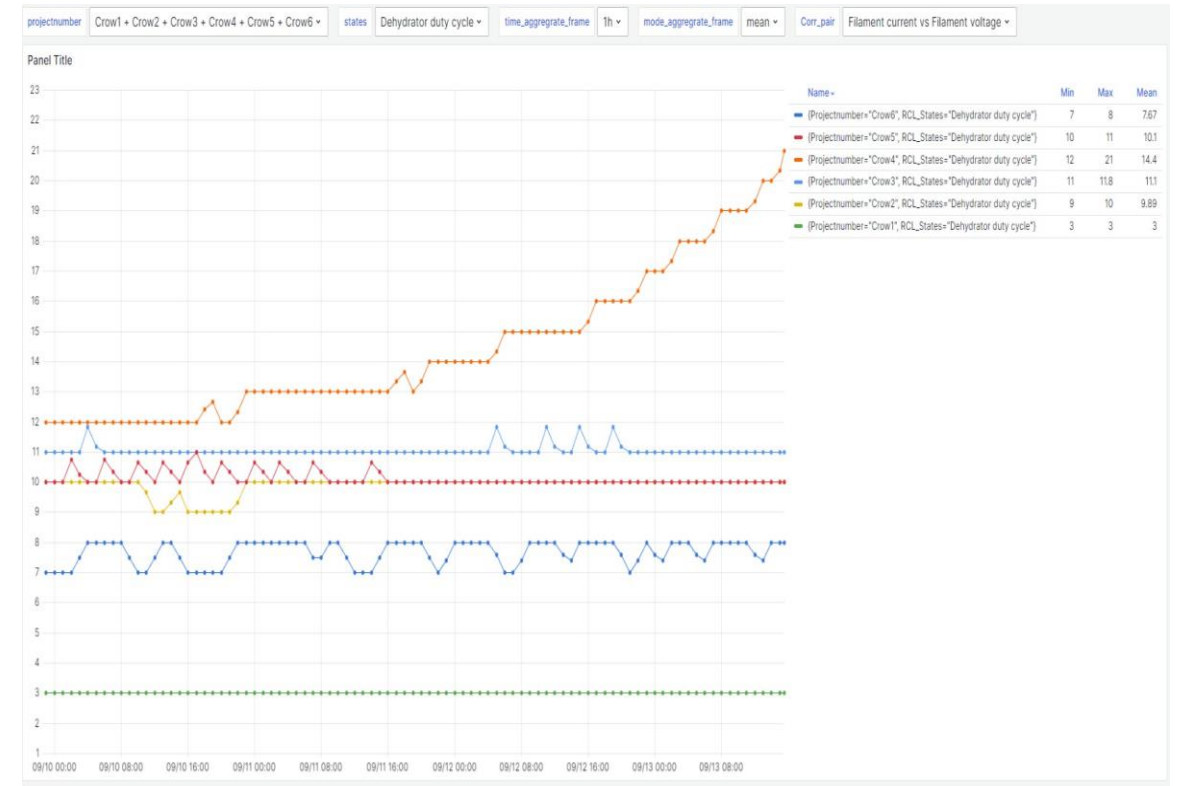

THEN WHAT WE DO NOW : USING GRAFANA TO DISPLAY ALL BITE DATA

WHAT IS PREDICTIVE MAINTENANCE (3.0 AND 4.0)? = DATA-DRIVEN

Few Recent Real Case

Working Fine

Something went wrong

Window of time before customer getting notifications

Maybe we can inform and warn customer to check, or replace later

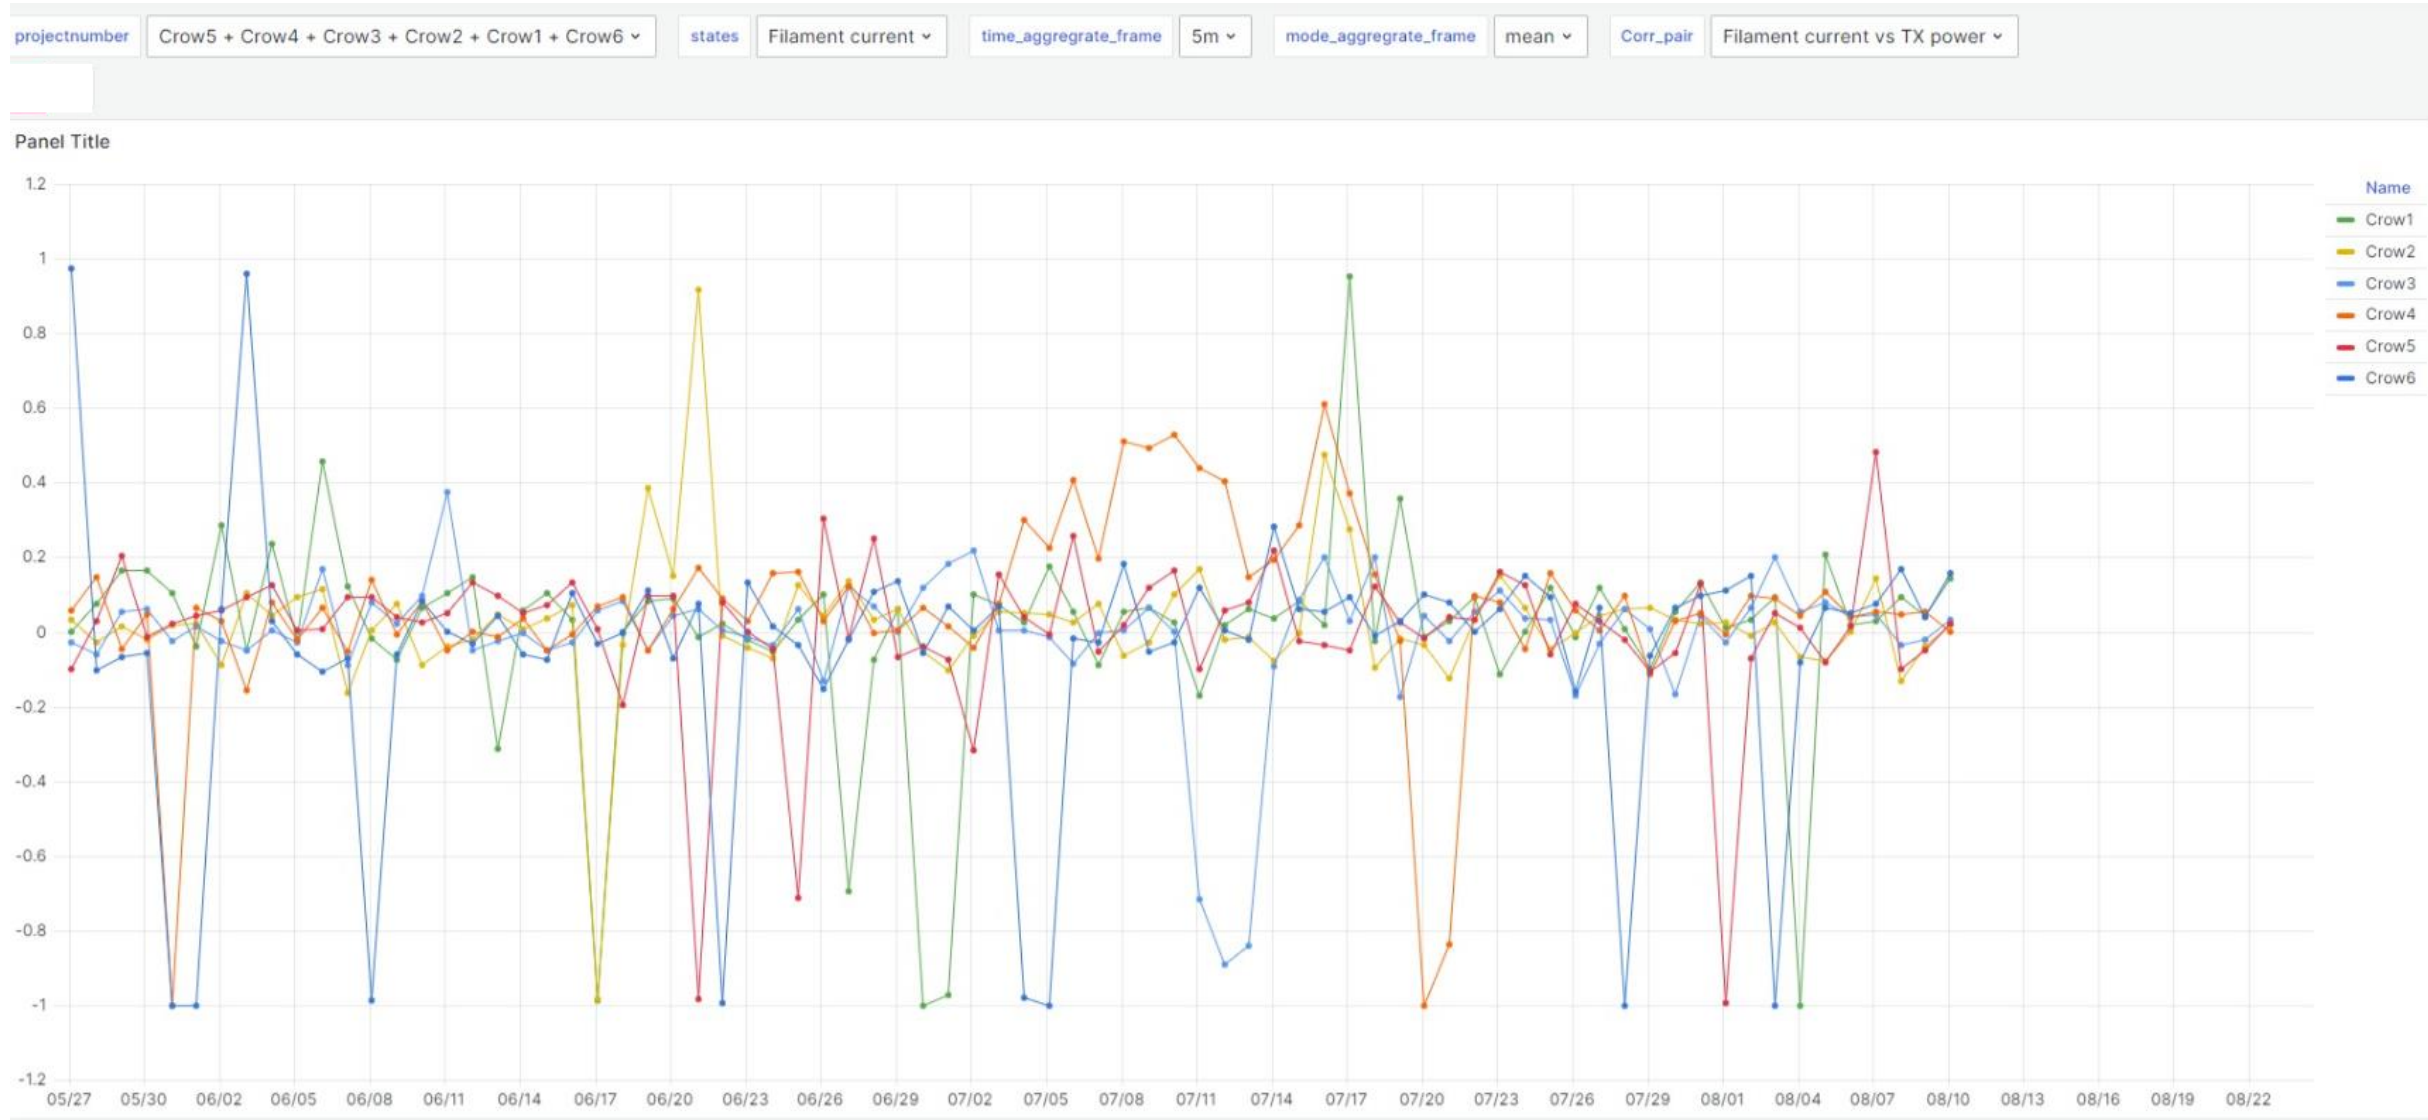

Statistics of different parameters

Correlation matrix

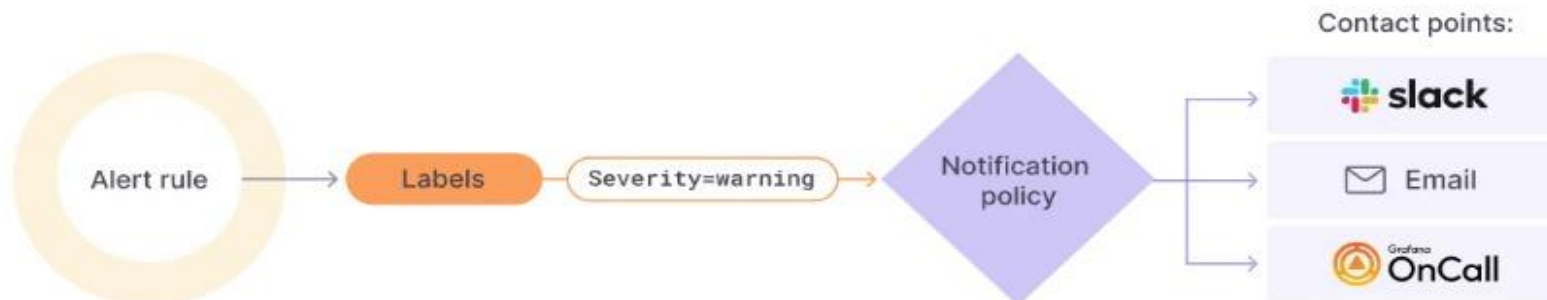

Statistics of different parameters

Machine learning, prediction, and real-time alert notification

Model to forecast time series data

Prophet Model
Developed by
Facebook

These alerts can serve as a simple **data-driven predictive maintenance 3.0**

OUTLINE

- IoT
- Example
- Monitoring and maintenance
- The concept
- **Advantage**

STEPS OF DATA DRIVEN PREDICTIVE MAINTENANCE 4.0

- Data Collection
- Feature Engineering
- Machine learning Models
- Interpretation and improvement
- Predict the failure's time window - predictive maintenance 4.0
- Estimate the remaining useful time of machine - predictive maintenance 4.0

ADVANTAGES

Reduced asset
downtime

Maintenance can be scheduled to prevent unplanned downtime

Ensures Consistent operational efficiency.

Maintenance & parts
optimization

Replacements are on hand when needed

Avoids last-minute rush and potential error

Extend remaining
useful life

Optimizes the use of assets

Operates efficiently for a longer time extending their useful lifespan

Thank you
