Lowest Grass Minimum Temperature:
-0.6 °C at Shobden (Herefordshire)

Most Rainfall:
8.2 mm at Acklington (Northumberland)

Most Sunshine:
11.3 hours at Plymouth (Devon)

General summary

For much of the country it was a cloudy night and although largely dry across many southern and western counties of England, a few showers affected many central and eastern districts of both Scotland and England. An area of more organised rain affected western parts of Scotland and northwest England.

Most places dawned cloudy with continuing showers across northern and eastern districts. Southern Britain dawned dry and across southwest England there were a few breaks to allow some bright or sunny spells to develop.

The morning saw the rain band across north-western districts slowly pushed south into other parts of northwest England and the Midlands. Showers continued to affect eastern counties and these became more widespread across Scotland. For the rest of the country, including Wales, central southern and southwest England it remained dry with sunny intervals and patchy cloud, the best of the sunshine was across Devon and Cornwall and parts of South Wales.

The afternoon saw little general change with showers continuing to affect much of Scotland, northern and eastern England whereas many southern and south-western counties remained dry with variable amounts of cloud.

It was a windy day with moderate to fresh north-westerly winds across the country, the wind only slowly moderating during the afternoon.

It was a cool day everywhere and particularly chilly across Scotland, Northern Ireland and northern counties of England.
