-7.3 °C at Dishforth, Leeming and Linton-on- Ouse
(North Yorkshire)

Most Rainfall:
44.0 mm at Aultbea (Ross & Cromarty)

Most Sunshine:
6.9 hours at Sunderland (Tyne & Wear)

General summary

A band of rain, lying from The Wash to Portland Bill at midnight, moved south-eastwards in the early hours to clear eastern parts of Kent a few hours later, although patchy light rain and drizzle lingered in places until dawn. Another area of rain clipped the Outer Hebrides and the extreme northwest of Scotland slightly later in the night, then returned through the morning, becoming heavy at times, especially over the northwest Highlands. This area of rain stretched southeast into the Great Glen for a time in the evening.

Fog affected parts of England around dawn, these patches lasting through much of the day in parts of the north Midlands and Lincolnshire. However, much of England and Wales, apart from the cloudy far south, saw plenty of sunshine.

The evening saw cloud increase in the south, thick enough in places to give outbreaks of light drizzle in places.

Temperatures were mild or very mild almost everywhere, the main exception being where the fog lingered, here it was near normal.

Daily weather statistics

	London	Edinburgh	Cardiff	Belfast
Maximum Temperature/°C:	9.7	8.6	10.5	7.9
