

UK Climate Resilience Programme

Bringing together fragmented climate research and expertise to undertake robust, multi- and inter-disciplinary climate risk and adaptation research to build UK capacity for resilience to climate variability and change.

Climate Risks

Characterising and quantifying climate-related risks to the UK

Heat extremes

Droughts

Storms

Extreme rainfall

Climate Adaptation

Managing climate-related risks through adaptation

Resilient
sea defences

Resilient
flood defence

Resilient to
heat extremes

Resilient food

Climate Services

Working with partners to turn climate information and knowledge into action

Roadmap

Climate resilience
research community

Standards, guidance &
codes of practice

Health

Cross Cutting

Many of the activities will span these themes in order to address the complexity, uncertainty and high decision stakes which characterise climate change adaptation and resilience building.
