Severe thunderstorms

Lightning has a severe effect on livelihoods in India each year, and sometimes results in fatalities. Outdoor workers such as farmers are particularly impacted.

In collaboration with the National Centre for Medium Range Weather Forecasting (NCMRWF) under MoES and the Met Office, WCSSP India has produced the first lightning forecasts over India using a model that is able to capture individual convective storms.

Benefits for India and the UK

Weather and Climate Science for Service Partnership (WCSSP) India is part of the WCSSP programme, jointly supported by the UK Government’s Newton Fund and the Indian Ministry of Earth Sciences (MoES). The WCSSP programme is developing a network of partnerships that harness the scientific expertise needed to strengthen the resilience of vulnerable communities to weather and climate variability. The Met Office and MoES work in partnership on the WCSSP India project.
